

Ravikanth Reddy

Java Automation Test Engineer

Email: vvrkr5674@gmail.com

Mobile: +91 8106552968

Professional Summary:

- Having **4 years of experience** in **Software Testing**, including **Manual Testing** and **Automation Testing** using **Java**, **Selenium WebDriver**, and API automation tools.
- Strong expertise in **automating web applications** using **Java with Selenium**, following best practices and design patterns like **Page Object Model (POM)** and **modular test frameworks**.
- Proficient in test automation using **Selenium WebDriver with Java**, **TestNG/JUnit** frameworks, implementing test design patterns, assertions, parameterization, and generating HTML reports.
- Experience in developing **data-driven and hybrid automation frameworks** using **Java**, and **JSON**.
- Hands-on experience in REST API testing using Postman and REST Assured, including validation of status codes, JSON response verification, authentication handling, and API performance monitoring.
- Solid understanding of **Software Development Life Cycle (SDLC)** and **Software Testing Life Cycle (STLC)** with strong exposure to **Agile (Scrum)** methodology.
- Experienced in preparing **test plans**, writing **manual test cases**, and executing **Smoke, Sanity, Functional, Regression, Retesting, Cross-browser, and UAT** testing.
- Skilled in **bug tracking and test management tools** like **JIRA** and **Rally**.
- Good knowledge of **SQL** for backend validation and writing queries for data verification.
- Basic working knowledge of **Git** and **Jenkins** for test integration in **CI/CD pipelines**.
- Capable of handling **XPath and CSS selectors**, dynamic elements, dropdowns, alerts, and window handling in Selenium.
- Well-versed in developing reusable automation utilities in Java for common tasks such as reporting, Excel data handling, and API integration.
- Strong debugging and troubleshooting skills with experience in **log analysis**, **test failure root cause analysis**, and **automation maintenance**.
- Quick learner with strong interpersonal skills, effective team collaboration, and experience interacting with developers and clients during daily stand-ups, sprint reviews, and retrospectives.

Professional Experience:

- Worked as Automation Engineer in Capgemini, Bangalore from May 2022 to Till Now.

Technical Summary:

Languages	:	Java, JavaScript, Playwright, Selenium
IDE's	:	VS Code, Eclipse
Operating System	:	Windows & Linux
Frameworks	:	Playwright Test, Selenium WebDriver, TestNG, JUnit, Cucumber (BDD)
Version Ctrl Tools	:	Git
Databases	:	MySQL

Bug Tracking Tools : Jira And Rally

Project 2: E-Commerce Order & Checkout

Domain: E-Commerce

Client: Walmart Global Tech (USA)

Role: JavaScript Playwright Automation Engineer

Tools & Technologies: JavaScript, Playwright, API, MySQL, Jenkins, Git

Duration: Mar 2025– May 2026

Description:

This project automated critical e-commerce workflows including product search, cart management, checkout, payment processing, and order confirmation. The automation validated seamless interaction between UI workflows and backend microservices during high-traffic sales events.

Responsibilities:

- Designed and implemented a **Scalable automation framework using playwright with JavaScript** for UI and **API testing**.
- Automated **UI** workflows using **playwright with JavaScript** for product browsing, add-to-cart, checkout, and order confirmation.
- Developed **API** automation scripts using JavaScript for order creation, payment processing, and inventory updates.
- Used **Java** fixtures for browser setup, authentication tokens, test data creation, and teardown.
- Validated **MySQL** database records to ensure order, payment, and inventory data consistency.
- Integrated automation execution with Jenkins **CI pipelines** for regression and smoke runs.
- Configured Allure reports to capture execution metrics, failures, and business-critical coverage.
- Collaborated with US product owners and QA teams during sprint planning and defect triage.
 - Used **Playwright with JavaScript** for automating modern UI flows like checkout, payments, and form submissions.
 - Automated **cross-browser testing** (Chrome, Firefox, WebKit) using Playwright's built-in support.
 - Used Playwright screenshots, videos, and traces for **debugging failures**.

Project 1: Patient Enrolment & Insurance Validation

Domain: Healthcare

Client: Anthem Blue Cross Blue Shield

Role: Automation Test Engineer

Tools & Technologies: Java, Robot Framework, Selenium, BDD, Jenkins, Postman, Allure

Duration: May 2022 – Feb 2025

Description

This project automated patient enrolment and insurance validation workflows for Anthem's healthcare platforms. The system handled member onboarding, policy verification, and coverage eligibility checks across multiple integrated systems. We used Playwright to **validate patient enrolment forms, eligibility screens, and confirmation pages**, especially where Selenium had sync issues.

Responsibilities

- Automated web-based enrolment workflows using **Selenium** with Robot Framework.
- Validated insurance coverage and eligibility rules through integrated REST APIs.
- Created keyword-driven automation framework using **Robot** Framework for better maintainability
- Executed end-to-end testing from patient enrolment to policy activation.
- Performed backend validation by querying **MySQL** databases.
- Integrated automation execution with Jenkins CI pipelines.
- Conducted cross-browser testing for patient portals.
- Generated detailed **Allure** execution reports for **QA** and management review.
- Coordinated with US onshore teams to resolve automation failures and functional defects.

Educational Qualifications:

B. Tech- **Annamacharya Institute of Technology and Sciences**, JNTUA from 2017-2021.
